

INDIA GENERAL ELECTIONS RESULT ANALYSIS 2024

Project Description:

This project leverages SQL Server to comprehensively analyze the 2024 Indian General Elections, focusing on data-driven insights and trends across various states and constituencies. The primary objective is to understand voter behavior, analyze candidate performance, examine regional trends, and identify patterns in voter demographics.

Query Explanation:

1. Common Table Expression (CTE) RankedCandidates

- **WITH RankedCandidates AS:** This section creates a Common Table Expression (CTE) named RankedCandidates, which is used to rank candidates based on their total votes within each constituency.
- **SELECT ... FROM constituencywise_details cd:** This part of the CTE retrieves data from the constituencywise_details table, including:
 - cd.Constituency_ID: The ID of the constituency.
 - cd.Candidate: The name of the candidate.
 - cd.Party: The party of the candidate.
 - cd.EVM_Votes: The number of EVM votes received by the candidate.
 - cd.Postal_Votes: The number of postal votes received by the candidate.
 - cd.EVM_Votes + cd.Postal_Votes AS Total_Votes: The total votes received by the candidate (sum of EVM and postal votes).
- **ROW_NUMBER() OVER (PARTITION BY cd.Constituency_ID ORDER BY cd.EVM_Votes + cd.Postal_Votes DESC) AS VoteRank:**
 - ROW_NUMBER() is a window function that assigns a unique rank to each candidate within their respective constituency.
 - PARTITION BY cd.Constituency_ID ensures that the ranking is done separately for each constituency.
 - ORDER BY cd.EVM_Votes + cd.Postal_Votes DESC orders candidates by their total votes in descending order, so the candidate with the most votes gets rank 1.
- **JOIN ... ON ...:** Joins are performed to combine information from related tables:
 - constituencywise_results cr ON cd.Constituency_ID = cr.Constituency_ID
 - statewide_results sr ON cr.Parliament_Constituency = sr.Parliament_Constituency
 - states s ON sr.State_ID = s.State_ID
- **WHERE s.State = 'Maharashtra':** Filters the results to include only data related to the state of Maharashtra.

2. Main Query

- **SELECT ... FROM RankedCandidates rc:** The main query retrieves data from the RankedCandidates CTE to find the winning and runner-up candidates for each constituency.
- **MAX(CASE WHEN rc.VoteRank = 1 THEN rc.Candidate END) AS Winning_Candidate:**
 - CASE WHEN rc.VoteRank = 1 THEN rc.Candidate END selects the candidate with the highest vote rank (rank 1) for each constituency.
 - MAX(...) ensures that only one candidate is selected for each constituency.
- **MAX(CASE WHEN rc.VoteRank = 2 THEN rc.Candidate END) AS Runnerup_Candidate:**

- CASE WHEN rc.VoteRank = 2 THEN rc.Candidate END selects the candidate with the second highest vote rank (rank 2) for each constituency.
- MAX(...) ensures that only one candidate is selected for each constituency.
- **JOIN ... ON ...:** Joins the RankedCandidates CTE with the constituencywise_results table to get the constituency names.
- **GROUP BY cr.Constituency_Name:** Groups the results by constituency name to ensure that the winning and runner-up candidates are determined for each constituency.
- **ORDER BY cr.Constituency_Name:** Orders the results alphabetically by constituency name for easier readability.
